Belarusian power station power generation

Overview

Renewable energy generation accounted for 6% of Belarus's energy in 2018, rising to 8% in 2020, mostly from biofuels and waste. Renewables share in electricity generation was 2% in 2018 (0.8 TWh).

Most in is cheap , and Belarus is a net energy importer. According to , the energy import vastly exceeded the in.

Belarus is a large oil refiner, listed 36th in the world, at 19 Mt of oil products in 2018 by the IEA. It has two refineries and oil pipelines built during.

Because non-nuclear thermal power plants are ramped up and down depending on heat requirements, and nuclear is not very flexible, increased battery storage has.

The country is one of the world's largest importers of natural gas with estimates for 2018 being about 17 Mtoe (20 billion cubic metres [bcm]) of natural gas, making it the leading importer among the so-called EU4Energy countries: , .
