AC inverter pre-charging

Overview

How does a pre-charge circuit protect the inverter?

Pre-charge circuits protect the inverters by controlling the initial power surge. PTC thermistors can help a pre-charge circuit protect the inverter. Inrush current occurs when the maximum instantaneous input current flows through a system when the electrical power is switched on.

Do I need to pre-charge my inverter?

All of our large inverter and inverter/charger kits include the required resistor to allow you to safely pre-charge it. If you have a lithium battery bank, it's really important to pre-charge your inverter (2000W+) to protect your BMS. Nevertheless, pre-charging is still necessary if you have AGM batteries.

Can a grid-tie inverter be pre-charged from the AC side?

This application note presents a technique for pre-charging the DC bus of a grid-tie inverter from the AC side. This technique is commonly used in imperix systems. Proper solutions for discharging the power converter is also addressed. Why pre-charging an inverter's DC-bus?

.

How do I use an AC pre-charge circuit?

One way of implementing that AC pre-charge circuit is by using imperix's handy Grid connection panel. It includes the three current-limiting resistors and the two relays (controllable from a B-Box controller), as well as an additional circuit breaker. When the converter is not switching and that its DC bus is not charged, all contactors are open.

Why do inverters pre-charge a DC-BUS?

Why pre-charging an inverter's DC-bus?

Nowadays, Voltage Source Converter (VSCs) are widely used in grid-tied applications. They indeed offer several benefits over Current Source Converters (CSCs), such as reduced filtering requirements, superior efficiency and easier use in weak grid conditions.

How to charge a DC inverter?

Pre-charging an inverter is simple. You just need to connect a suitable resistor between the DC load and inverter for a few seconds. Then, remove the resistor and connect the DC load to the inverter. The following method breaks this down, step by step. Connect the inverter to your negative and positive busbars.
