

## SolarInvert Energy Solutions

# Battery BMS main functions

## Overview

---

A battery management system (BMS) monitors and manages the advanced features of a battery, ensuring that the battery operates within its safety margins. The BMS serves as the brain of a battery pack. A BMS is not only critical to the safe operation of a battery, it's also critical to a battery's optimal.

The primary function of a battery management system is to protect the lithium cells from excessive heat or cold, voltages that are too.

A BMS monitors each cell within a battery pack (all current lithium batteries for RVs contain a number of smaller "cells" that are wired together to.

Briefly reviewing the most important protections offered by a BMS, we can summarize them as protection from under- or over-voltage.

A battery management system is a critical safety system that must be employed due to the thermal runaway potential of lithium batteries in.
