

## SolarInvert Energy Solutions

# Can installing photovoltaic panels prevent corrosion

## Overview

---

What is galvanic corrosion in solar PV?

The life of a solar PV system may be seriously effected by galvanic corrosion. The type of metal and the atmospheric conditions such as moisture and chlorides can cause serious structural failures in racking and mounting components. Galvanic Corrosion and Protection in Solar PV Installations | Greentech Renewables [Skip to main content](#) [menu](#).

Can solar PV racking corrosion occur?

The metals in solar PV racking and mounting systems can be faced with corrosion if wrong metals are used together. The life of a solar PV system is 25 years, therefore system installers must target a similar life span for the racking materials. How does galvanic corrosion occur?

.

How do I protect my solar panels from galvanic corrosion?

For example, when installing solar panels onto mounting rails, some thought should go into preventing galvanic corrosion between dissimilar metals. A good installer will use an anti-seize compound on the fasteners or an anti-corrosion coating designed for dissimilar metals.

Why is corrosion a problem in solar panels?

Author: Ph.D. Yolanda Reyes, March 24, 2024. Corrosion in solar panels represents a significant problem in the solar energy industry, caused by exposure to aggressive environmental conditions. Corrosion in photovoltaic modules will lead to a reduction in module power output and affect the entire output of your system.

Can solar panels be corroded?

Representative image of corrosion in solar modules1. Corrosion can also

reduce the lifetime of solar panels, resulting in additional maintenance and replacement costs. Likewise, repair or replacement of corroded components can be costly and affect the long-term profitability of solar projects.

How to prevent corrosion in PV systems?

The installer has to be careful in choosing the right material. We usually suggest using anodized components to prevent corrosion for the PV systems that are near ocean (salt conditions). Below is a list of best practices for corrosion prevention: Use one material to fabricate electrically isolated systems or components where practical.
