# **Canadian Flow Battery Planning**

#### **Overview**

How can Canada get more battery storage projects off the ground?

Global market forces are moving battery storage from margin to mainstream, and federal and provincial governments in Canada are making moves to get more battery storage projects off the ground here at home. To date, the main source of federal support has come through the Canada Infrastructure Bank (CIB).

What is Canada's battery Innovation Program?

This project, funded through Natural Resources Canada's Energy Innovation Program, will also enable Canada's battery innovators, including stakeholders across industry, academia and government, to advance their priorities for a sustainable battery ecosystem while cementing Canadian battery innovation leadership in the global marketplace.

Will battery storage capacity rise to support Canada's climate goals?

At the same time, battery storage capacity will likely need to rise even further to support Canada's climate goals. Our recent analysis with Navius Research shows that battery storage capacity needs to rise above 12,000 megawatts by the end of this decade and to around 50,000 megawatts by mid-century to align with Canada's climate targets.

Can Ontario increase its battery storage capacity?

At the provincial level, Crown corporations and system operators are taking action. Ontario is making big strides to increase its battery storage capacity. The largest project under construction in the province is currently the Oneida Energy Storage project, which is expected to have an installed storage capacity of 250 megawatts by 2025.

Can Canada lead the charge in next-generation batteries?

Batteries can be improved both through incremental advances and through

breakthroughs. Now more than ever, Canada has the opportunity to build on its historic contributions to battery technology and lead the charge in nextgeneration batteries.".

Will Canada's battery storage capacity increase in 2024?

In 2024, projects that are planned or under construction could bring Canada's total battery storage capacity up to 559 megawatts. By 2028, that could rise to 4,177 megawatts—a 45-fold increase from 2023 figures. At the same time, battery storage capacity will likely need to rise even further to support Canada's climate goals.
