Communication system consists of base stations

Overview

In the area of wireless computer networking, a base station is a radio receiver/transmitter that serves as the hub of the local wireless network, and may also be the gateway between a wired network and the wireless network. It typically consists of a low-power transmitter and .

A base station is an integral component of wireless communication networks, serving as a central point that manages the transmission and reception of signals between cellular networks and mobile devices. It ensures that users can access voice and data services effectively.
