Double-glass solar panels

Overview

Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people stomp on it (during installation), the solar cells bend dramatically, resulting in microcracks on the cells.

There is a clear distinction between single and double glass solar panels. This difference should be clear by this- .

The front surface of double glass mono solar cells has an emitter layer and the back side has a dark covering. Passivated Emitter and Rear.

Typically, solar panels have a front glass panel and a back plastic sheet. These single-sided glass panels are supported by frames across the.

 Efficient Higher Revenue

 Intelligent Simple O&M

 Flexible Abundant Configuration

- Max. Efficiency 97.5%
- Max. PV Input Voltage 1000V
- 150% Peak Output Power
- 2 MPP Trackers, 150% DC Input Oversizing
- Max. PV Input Current 15A, Compatible with High Power Modules

- IP65 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPDs: prevent lightning damage
- Battery Reverse Connection Protection

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
