How many hybrid energy storage power stations are there in the United States

Overview

At the end of 2023, there were 469 hybrid plants (>1 MW) operating across the United States (+21% compared to the end of 2022), totaling nearly 49 GW of generating capacity (+19%) and 3.6 GW/11.1 GWh of energy storage (+59%/+67%). How much storage capacity does a PV+storage hybrid plant have?

As of the end of 2023, there was roughly as much storage capacity operating within PV+storage hybrid plants as in standalone storage plants (~7.5 GW each). In storage energy terms, however, PV+storage edged out standalone storage by ~7 GWh (24.2 GWh vs. 17.5 GWh, respectively).

How many hybrid plants are there in 2023?

Key findings from the latest briefing include: At the end of 2023, there were 469 hybrid plants (>1 MW) operating across the United States (+21% compared to the end of 2022), totaling nearly 49 GW of generating capacity (+19%) and 3.6 GW/11.1 GWh of energy storage (+59%/+67%).

How many co-located hybrid plants are there?

Based in part on Form EIA-860 data, there were at least 226 co-located hybrid plants (>1 MW) operating across the United States at the end of 2020, totaling more than 30 GW of aggregate capacity (see map below).

Do hybrid PV+storage plants provide energy arbitrage & resource adequacy?

Hybrid plant configurations reflect their primary use cases : The relatively high average storage ratio and duration of PV+storage plants suggest that storage is providing resource adequacy (i.e., capacity firming) and energy arbitrage (i.e., shifting power sales from lower- to higher-priced periods) capabilities to PV+storage plants.

How many hybrid plants are there in 2022?

Last year was another big year for hybrid plants in the United States . At the

end of 2022, there were 374 hybrid plants (>1 MW) operating across the United States (+25% compared to the end of 2021), totaling nearly 41 GW of generating capacity (+15%) and 5.4 GW/15.2 GWh of energy storage (+69%/+88%).

Are hybrid and co-located power plants a good investment?

Interest in Hybrid and Co-Located Power Plants Continues to Grow Falling battery prices and the growth of variable renewable generation are driving a surge of interest in “hybrid” power plants that combine, for example, wind or solar generating capacity with co-located batteries.

How many hybrid energy storage power stations are there in the United States

U.S. Hydropower Market Report

Hydropower accounted for 6.6% of all electricity generated and 38% of electricity from renewables produced in the United States in 2019.⁷ Additionally, 43 PSH plants with a total power capacity ...
