# Introduction to Energy Storage Equipment

### **Overview**

### What is energy storage?

Energy storage is the capturing and holding of energy in reserve for later use. Energy storage solutions for electricity generation include pumped-hydro storage, batteries, flywheels, compressed-air energy storage, hydrogen storage and thermal energy storage components.

What are the applications of energy storage systems?

Advances in materials science and nanotechnology have also led to the development of new storage technologies, such as solid-state batteries and advanced supercapacitors. One of the primary applications of energy storage systems is in the integration of renewable energy sources like solar and wind power.

Why do we need energy storage systems?

By coupling renewable energy generation with energy storage, excess energy can be captured and dispatched when needed, thus enhancing the reliability and flexibility of the electricity system. Energy storage systems are essential for achieving a sustainable and resilient energy infrastructure.

What are energy storage solutions for electricity generation?

Energy storage solutions for electricity generation include pumped-hydro storage, batteries, flywheels, compressed-air energy storage, hydrogen storage and thermal energy storage components. The ability to store energy can facilitate the integration of clean energy and renewable energy into power grids and real-world, everyday use.

Are energy storage systems scalable?

Many mature and emerging energy storage technologies utilize combinations of thermal, mechanical, and chemical energy to meet storage demands over a variety of conditions. These systems offer the potential for better scalability

than electrochemical batteries.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical storage system that allows electricity to be stored as chemical energy and released when it is needed. Common types include lead-acid and lithium-ion batteries, while newer technologies include solid-state or flow batteries.
