# Lithium content standards for solar panels

#### **Overview**

Will new EPA rules improve recycling of end-of-life solar panels & lithium batteries?

EPA is planning to propose new rules to improve the management and recycling of end-of-life solar panels and lithium batteries.

Will EPA add solar panels to Universal Waste Regulations?

On October 23, 2023, EPA announced a new rulemaking effort to improve the recycling and management of end-of-life solar panels and lithium batteries. EPA is developing a proposed rule to add solar panels to the universal waste regulations and to add tailored universal waste standards for lithium batteries.

What is the National Blueprint for lithium batteries?

This National Blueprint for Lithium Batteries, developed by the Federal Consortium for Advanced Batteries will help guide investments to develop a domestic lithium-battery manufacturing value chain that creates equitable clean-energy manufacturing jobs in America while helping to mitigate climate change impacts.

Should lithium batteries be classified as universal waste?

Establishing a category of universal waste specifically for lithium batteries will improve safety standards and reduce fires from mismanaged end-of-life lithium batteries, while continuing to promote battery recycling. EPA is working on standards in line with current industry best practices to harmonize battery management across the industry.

Are lithium-ion solar batteries rechargeable?

Standard lithium batteries are not rechargeable and, therefore, not fit for solar. We already use lithium-ion technology in common rechargeable products like cell phones, golf carts and electric vehicles. Most lithium-ion

solar batteries are deep-cycle LiFePO4 batteries.

Are lithium ion solar batteries good?

Most lithium-ion solar batteries are deep-cycle LiFePO4 batteries. They use lithium salts to produce a highly efficient and long-lasting battery product. Since they are deep-cycle batteries, the products do very well even when the attached solar panels experience inconsistent charging and discharging.
