

## **SolarInvert Energy Solutions**

# **Malaysia Power Storage Project**

## Overview

---

The MyBeST programme, which opened in May, aims to install four battery assets, each with a capacity of 100MW/400MWh. These batteries are designed to store solar-generated electricity during the day and release it back into the grid during periods of higher power demand. Are battery energy storage systems becoming a reality in Malaysia?

The utilities sector in Malaysia is witnessing significant advancements in battery energy storage systems (BESS), evolving from concept to reality with notable projects underway. The first large-scale BESS project is currently being constructed in Sabah, a pivotal development for the country's energy landscape.

Is Malaysia ready for energy storage?

Malaysia is rapidly expanding solar and other intermittent renewable generation, creating strong momentum for energy storage. The country's first four large-scale grid-connected storage projects have attracted significant interest, with more than 20 companies submitting over 30 proposals.

Who has bid on Malaysia's first large-scale grid-connected energy storage project?

The first large-scale grid-connected energy storage project in Malaysia has attracted bids from over 20 companies, including Tenaga Nasional Berhad. (Image: TNB).

What is Malaysia's first utility-scale battery energy storage system?

Malaysian utilities company Sarawak Energy has commissioned what is described as the nation's first utility-scale battery energy storage system (BESS). The 60 MW/82 MWh BESS, which was first energized in Dec 2024, shares the site with the soon-to-be-phased-out Sejingkat Power Plant, first commissioned in 1998.

What is Malaysia's first large-scale battery project?

In 2024, Malaysia launched its first large-scale storage initiative, known as MyBeST, to build four grid-connected battery systems of 100MW/400MWh each. The bidding round opened in May and closed in July, with winning projects expected to come online by 2027.

What is driving demand for battery storage systems in Malaysia?

The growth of solar and other intermittent renewables is driving demand for battery storage systems. (Photo: iStock) Malaysia is rapidly expanding solar and other intermittent renewable generation, creating strong momentum for energy storage.
