Mauritius lithium battery processing plant

Overview

Why is battery energy storage system being introduced in Mauritius?

The CEB is introducing a Battery Energy Storage System (BESS) on its network to arrest the fluctuation inherent to Variable Renewable Energy (VRE) systems. This is due to the increasing share of VRE in Mauritius' energy mix, as the country's energy transition to a low carbon economy gains momentum.

Will a graphite-purification plant be built in Mauritius?

NextSource Materials Inc. plans to build a graphite-purification plant in Mauritius' freeport zone, supplying manufacturers with the substance used to make electric-vehicle batteries.

Will lithium-ion battery growth spur graphite consumption?

Growth in the lithium-ion battery market is set to spur graphite consumption, according to the US Geological Survey. Global use of the material by that industry has tripled since 2019, it said, citing the Benchmark Mineral Intelligence.

What is Mauritius' long term energy strategy?

The Government of Mauritius' Long Term Energy Strategy 2009-2025 aims to increase the share of renewable energy in our energy mix to 35% by 2025. This includes reducing the country's dependence on coal and heavy oil for electricity generation.

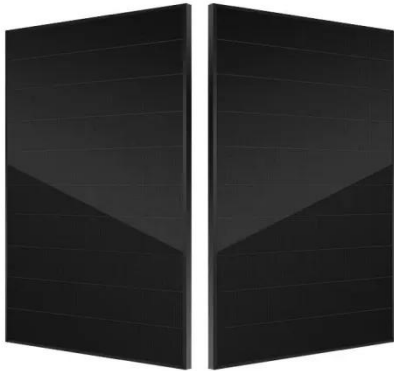

How will Mauritius transition to a low carbon economy?

Mauritius is transitioning to a low carbon economy, with the Central Electricity Board (CEB) installing the first grid-scale Battery Energy Storage System (BESS). This is the first of its kind in Mauritius and enables high capacity storage of renewable energy in the grid.

What are the next steps for baf1 in Mauritius?

The next steps for the Company are to complete the front-end engineering and design and environmental and social impact assessment (“ESIA”) permitting. The Company is in active discussions with strategic offtake partners and debt and equity financiers who have expressed an interest in funding the construction of BAF1 in Mauritius.
