

## SolarInvert Energy Solutions

# Myanmar grid-side energy storage cabinet cooperation model

## Overview

---

Energy cooperation plays an important role in One Belt One Road (OBOR) initiative, which has attracted global attentions since it was firstly announced by China. However, studies focused on China-Myan.

What is the power grid in Myanmar?

Myanmar Power Grid consists of national interconnected power grid and isolated power grids in remote areas. It mainly includes four voltage levels of 230 kV, 132 kV, 66 kV, and 33 kV. Existing generation condition in Myanmar is shown in Fig. 1, including four major types of sources: hydropower, natural gas, coal, and diesel.

How will cloud computing help Myanmar build a smart grid?

The project will be completed in September 2021, which will be able to train a group of industry-oriented senior cloud computing talents for Myanmar as well as Mekong countries. This will help Myanmar to construct a data-based smart grid and communicate with other countries in a much more efficient manner.

What is China-Myanmar energy cooperation?

The China-Myanmar energy cooperation mainly includes two major parts, namely cooperation in non-renewable energy such as oil, gas, and minerals, and renewable energy, such as solar, wind and hydropower.

Is China-Myanmar energy cooperation under Obor a good idea?

This paper provides a comprehensive investigation and analysis of China-Myanmar energy cooperation under OBOR, which key points can be concluded as the following four aspects: The completed or ongoing China-Myanmar energy projects have brought about positive outcomes and accumulated experiences and lessons for further cooperation.

Are microgrids a cheapest power source in Myanmar?

Discussion The LCOE values of microgrids powered by solar PVs and batteries in Myanmar are still high, but lower than those of diesel power sources

depending on fuel price – and these systems are expected to be one of the cheapest power sources in the near future in combination with LIBs.

Can microgrids be used in rural electrification in Myanmar?

In Myanmar, SHSs were deployed in off-grid areas by the government (Greacen, 2015; Sovacool, 2013). In the current study, we focused on microgrids, which have a distributed power source and supply electricity to households. In the context of rural electrification in Myanmar, we use microgrids to mean only the isolated system from the main grid.
