# Pack lithium battery environmental requirements

## Overview

---

Do lithium ion batteries need packaging regulations?

Lithium ion batteries, essential for a multitude of devices and applications, are subject to stringent packaging regulations set by the U.S. Department of Transportation (DOT).

Are lithium-ion batteries regulated?

The scope covers lithium-ion batteries used for e-mobility and stationary energy storage applications. Batteries for other applications, such as consumer devices, are covered by the EU Regulation and may be regulated as well using some of the same criteria, but are outside the scope of this document.

What are the OSHA standards for lithium-ion batteries?

While there is not a specific OSHA standard for lithium-ion batteries, many of the OSHA general industry standards may apply, as well as the General Duty Clause (Section 5(a)(1) of the Occupational Safety and Health Act of 1970). These include, but are not limited to the following standards:.

How should lithium ion batteries be shipped?

According to the DOT, lithium ion batteries must be shipped in a manner that protects against: As a standard guideline, metallic inner packaging for lithium ion batteries is prohibited. Each battery or cell must be entirely enclosed to prevent contact with other equipment or any conductive materials.

How are lithium ion batteries packaged?

Each battery or cell must be entirely enclosed to prevent contact with other equipment or any conductive materials. The inner packaging containing lithium ion batteries can be placed in containers crafted from various materials, including metal, wood, fiberboard, or solid plastic jerrycans.

Are lithium ion batteries class 9 regulated?

Lithium-ion batteries are classified as UN Nos. 3480 and 3481 (lithium-ion batteries and lithium-ion batteries contained in equipment or packed with equipment). When tests criteria described in the regulation are satisfactorily met, the battery can be shipped as Class 9 regulated battery.
