

## SolarInvert Energy Solutions

# Solar photovoltaic panels have a sour smell

## Overview

---

Why do solar panels emit a lot of dirty electricity?

Solar panel systems – particularly their inverters – are attributed with elevated magnetic fields, with rf radiation and “high voltage transients” emissions (aka “dirty electricity”) that travel along the wiring in the house, and some of this even travels along the electrical wiring or in the ground outside to neighboring homes.

Do solar panels fail?

As some brands cut corners on product quality to remain price-competitive, solar panels start to fail in the field before their expected lifetime is up. Here are 11 of the most common solar panel defects to watch out for in a solar installation, and how WINAICO works to prevent them from happening to your sites.

How do solar panels use DC current?

“In order to use the DC current the solar panels generate, you need to use an inverter that converts it to alternating current (AC). The problem is, the inverter used to generate AC is a phenomenal source of dirty electricity. I remediated mine and radically decreased the EMI generated when the inverters are on during the day.

Do solar panels have hot spots?

Eventually, hot spots in solar panels become visible to the eye: the problematic cell becomes brownish. Hot spots lead to a faster solar panel degradation and can even start a fire on your roof. To avoid that, clean your panels from dirt every now and then. Before the installation, carefully pick a place without any shade.

What are worm marks on solar panels?

Snail trails or worm marks are short thin dark lines on the surface of a solar

panel. Just to clear it up: they have nothing to do with actual snails. They may appear several years after the installation along the edges and, most importantly, where microcracks are located.

What happens if a solar cell is not coloured correctly?

Uneven solar cell colours can result in disappointing full black installations. WINAICO meticulously sort solar cells into categories by colour before production to make sure every full black solar panel from WINAICO is consistent in colour for the best appearances.

## Solar photovoltaic panels have a sour smell
