

SolarInvert Energy Solutions

Solar photovoltaic panels in the stairwell

Overview

Do solar installers need conduit penetrations?

It's important to know this and ask these questions because oftentimes solar installers are required to follow the plans that are provided to them. Proper conduit penetrations are key in preventing water intrusion into the attic and can extend the longevity of your solar energy system.

How does a solar inverter work?

During your solar energy system installation, the specialist will route the conduit from each solar array to your solar inverter, running either through your attic (if there's available access) or along your roof, and down an exterior wall of your home.

Are solar panels a good idea?

Installing solar panels is a great way for you to save on electricity bills and contribute to a greener planet. It's also an ideal way to begin establishing more energy independence. However, you'll quickly find that the installation process involves several critical decisions, one of which is determining the conduit's route.

Do solar panels need a junction box?

Additionally, a junction box may be installed if your solar design includes points where multiple lines of conduit intersect or any transitions from outdoor to indoor conduit. While there are multiple types of conduit available, we typically use the following five in solar panel installation:

Does solar conduit run outside?

Solar conduit that runs outside of your home on the roof is very common, but it doesn't look aesthetically pleasing. Unfortunately, it's also more susceptible to elements such as rain, snow, and wind.
